## from the nature, for the nature

The company *plantoBio eco bio systems GmbH* aims to replace, in agricultural areas, environmentally harmful products through local renewable raw materials.

The main emphasis is the use of biologically degradable materials in gardens and for packaging.

That's why *plantoBio* considers itself like an « inventor and problem solver for an ecological agriculture ».

### local renewable raw materials instead of plastics

The range of goods *plantoBio* is large:

#### Compostable planter pots :

Our compostable flowerpots are available in attractive colours and different size. They are made of bamboo, straw, sugar cane, and vegetal fibres. The pot can be composted after use with plant and soil.

#### papertwine

The use of binder from local renewable raw materials becomes very important. Our papertwine stand out because of their durability outside as well as in greenhouse or in household.

#### Papertwine fabrics

In the fabrics of *plantoBio* we combine high technology with sustainable raw materials.

There are different ranges of application:

Technical use :

- To assure the retention of embankment on slope site
- Protection against erosion for road- and rail construction
- Protection fabric against game's bite on bushes, vine yard and other plants.
- Protection fabric for the ground.

## Compostable accessory for horticulture :

- Compostable and biologically degradable twinesupport certified for tomatoes, peppers and other plants.
- Supports for bunches, clips and hooks for stems made of potato starch and lactic acid
- Hooks for shoots and supports for fruits usable several years – everything for the production of vegetable.

## Biologically degradable mulching paper and tiles

Our mulching paper and tiles can be mixed in the ground after the harvest and rot in a few weeks. Unlike plastic film used until now, no hazardous waste is produced by our products.

We also offer Displays, which can be offered when you like « **ready for sale** ».
